

Project Brief: High-Performance Web Platform & Sales Funnel

This document details the complete features, database admin controls, search visibility (SEO) architectures, sales funnel flow, and technological specifications engineered for your new website.

1. Detailed Features of the Website

The user-facing website contains the following components and dynamic pages:

Core Pages & Navigation

- **Responsive Header Navigation:** Features quick dropdown options for services, an instant ENG/■■■■■ language translation toggle, and a prominent "Make An Enquiry" consultation button.
- **Interactive Homepage:**
 - ***Hero Service Carousel*:** Slideshow displaying core services dynamically.
 - ***Infinite Logo Marquee*:** Monochromatic partners banner that pauses on hover.
 - ***Pillar Features*:** Section displaying core company advantages.
 - ***Testimonial Carousel*:** Interactive slider displaying customer reviews.
 - ***Interactive Budget Planner*:** Let users calculate ad campaign reach estimates.
 - ***Accordion FAQs*:** Collapsible section answering target customer questions.
- **Works/Case Studies Index (portfolio.html):** Grids displaying previous projects. Clicking any project opens the details page.
- **Services Index (services.html):** Lists core offerings with pointers.
- **Packages Index (packages.html):** Displays strategized growth pricing tiers.

Dynamic Details Pages (CMS Hydrated)

- **Case Studies details (work-details.html):** Renders custom metric scores (e.g. ***+140% Orders***), project durations, clients, cover images, and detailed HTML body text.
- **Service details (service-details.html):** Renders detailed capability descriptors and checklists of core project deliverables.
- **Package details (package-details.html):** Displays targeted package descriptors and feature lists.
- **Blog Reader (blog-details.html):** Dynamic article layout displaying date, author, reading time estimates, and HTML formatting.

Lead Generation Widgets

- **Quick Enquiry Popup Modal:** Centrally managed input modal asking for Name, Phone Number, Service Category, and Project Details.
 - **Viewport Floating WhatsApp Button:** Bottom-right floating icon with hover text prompting users to initiate direct sales chats.
-

2. Detailed Features of the Admin Panel

The admin dashboard is a secure, password-protected portal designed for non-technical users to manage the entire platform:

- **Secure Admin Login:** Restricts dashboard access to authorized administrators only.
 - **Blog Posts Manager (CMS):**
 - ***List View*:** View all posts with published/draft statuses.
 - ***Create/Edit Form*:** Inputs for Title (English), Title (Bengali), Body HTML Content (English), Body HTML Content (Bengali), Cover Image URL, Author Name, and Read Time.
 - **Case Studies Manager (CMS):**
 - ***Create/Edit Form*:** Inputs for Client Name, Project Duration, Category Tag, Target Metric Result (English & Bengali), and Project Details Body (English & Bengali).
 - **Leads Inbox Dashboard:**
 - ***Lead Listing Table*:** Displays Name, Phone Number, Selected Service, Message details, and Submission Date.
 - ***Actions*:** Mark lead as reviewed, archive, or click to call/WhatsApp the client.
-

3. Technical Infrastructure & Stack

To support high speed, scalability, and ease of management, the application is structured as a full-stack Next.js web application:

Front-End (User Interface)

- **Framework:** **Next.js 14+ (App Router)** for Server-Side Rendering (SSR) and optimized SEO indexing.
- **Styling:** **Tailwind CSS** for modern responsive interfaces.
- **Animations:** **Framer Motion** for premium carousel transitions, logo marquee behavior, and floating particle effects.
- **Internationalization:** `next-intl` for seamless path-based locale routing (`/en` and `/bn`).

Back-End & Data Management

- **Database:** **PostgreSQL** database (hosted on Vercel Postgres, Supabase, or Neon) for persistent, secure data storage.
 - **ORM Layer:** **Prisma ORM** for clean data queries.
 - **API Engine:** Next.js Serverless Route Handlers (`/api/leads`, `/api/blogs`).
-

4. Built-in SEO for Organic Google Visibility (Effective Results)

The site is built from the ground up to rank highly on search engines like Google:

- **Ultra-Fast Loading Times:** Lightweight code structure guarantees fast load speeds, satisfying Google's Core Web Vitals (critical for search ranking).
- **SEO Semantic Markup:** Uses clean HTML5 structure (`h1`, `h2`, `article`) which helps Google's web crawlers easily read and catalog your content.
- **Dynamic Meta Tag Management:** Every dynamic blog, case study, and service page automatically updates its search title and description meta tags matching the active language.

5. High-Converting Sales Funnel Architecture

The platform is designed to act as a structured sales pipeline, guiding visitors from interest to inquiry:

The Three-Step Pipeline:

1. **Top of Funnel (Attract):** Captures users from Google Search via SEO blogs, or from social ads targeting landing sections.
2. **Middle of Funnel (Educate):** Detailed case studies (Works) and specific services pages show real results and build instant trust.
3. **Bottom of Funnel (Convert):**
 - A floating WhatsApp button provides instant support.
 - Contextual CTA buttons pre-fill custom WhatsApp message queries based on what the user is looking at.
 - A quick consult popup form captures lead contact details.
